

Purav Bhatt

Flutter Developer — Dart, Riverpod, Supabase, Next.js

7042959910 | pbhatt340@gmail.com | linkedin.com/in/pb0504 | github.com/puravbhatt0504 | puravbhatt.me

Full-stack developer specializing in Flutter/Dart with production experience shipping cross-platform apps end-to-end — Riverpod, Supabase (Auth, Postgres, RLS, Edge Functions), CI workflows, GPS tracking, biometric auth, and on-device OCR. Also bring applied ML/data science experience from an internship at IIIT Delhi.

EDUCATION

Guru Gobind Singh Indraprastha University

Bachelor of Technology in Artificial Intelligence and Data Science

Delhi, India

Expected 2027

EXPERIENCE

Full-Stack Developer

Sep 2025 – Dec 2025

City Fire Services India

Delhi, India

- Built and shipped Employee Manager, a production workforce management system for a live company — two Flutter mobile apps (admin + field) and a Next.js admin portal, all backed by Supabase; system is in active use and versioned (v2.1.0, 830+ commits).
- Implemented state management with Riverpod across both Flutter apps, structuring providers for auth, live GPS tracking, and offline-safe sync via Hive local storage so field workflows keep working through network drops.
- Designed and secured the data layer: 12 PostgreSQL tables with Row-Level Security on every table, 21 REST API routes, and 4 Supabase Edge Functions (Deno) for cron-based auto-checkout, check-in reminders, and email automation.
- Built on-device OCR (Google ML Kit) to auto-parse UPI/payment screenshots for expense and advance entries, and Mapbox-based live location tracking, including fixing race conditions and adding cancellable async fetches to stop stale GPS data from overwriting live views.
- Added biometric auth (fingerprint/face), FCM push notifications, and multi-language (English/Hindi) support to the field app; shipped signed release APKs with ProGuard/R8 minification.
- Set up GitHub Actions CI and moved the team to a protected main branch with PR-based code review, after which all further work shipped through dev branches and pull requests.

Data Science Intern

Jul 2025 – Oct 2025

IIIT Delhi

Delhi, India

- Performed data cleaning, exploratory analysis, and feature engineering across multiple datasets to prepare inputs for machine learning model development.
- Built and evaluated machine learning baselines (scikit-learn) across multiple problem settings, comparing model performance to guide further experimentation.
- Supported graph neural network experiments by preprocessing graph-structured data and running training pipelines for the research team.

PROJECTS

Employee Manager | *Flutter, Riverpod, Supabase, Next.js, TypeScript* | [live](#)

- Production attendance/payroll system with GPS-verified check-in/out, auto-calculated salary slips (overtime, deductions, advances), and a live employee-tracking dashboard with Mapbox and Leaflet.

ExpenseLens | *Flutter, Dart, Node.js, Google ML Kit, Neon Postgres* | [live](#)

- AI-powered expense tracker that scans UPI/payment screenshots with on-device ML Kit OCR, auto-categorizes transactions, and visualizes spending with interactive charts.

GrindFlow | *TypeScript, Next.js, Supabase, AI*

- AI-powered peer-to-peer learning platform with note scoring, adaptive study flows, and auto-generated quizzes; built the Next.js App Router frontend with Google OAuth onboarding via Supabase.

Sikkim Tourism (Monastery360) | *Flutter, TypeScript, Next.js, Python, ML*

- Cross-platform digital heritage product for Smart India Hackathon 2025 with interactive maps, virtual tours, audio-guide experiences, and AI-assisted content discovery.

TECHNICAL SKILLS

Languages: Dart, TypeScript, JavaScript, Python, SQL, HTML/CSS

Mobile & Frontend: Flutter, Riverpod, Provider, Next.js (App Router), React, Tailwind CSS

Backend & Data: Supabase (Auth, Postgres, Realtime, Storage, Edge Functions), Row-Level Security, Node.js, Firebase, REST APIs, pg_cron

Mobile Platform Features: GPS/Geolocator, Mapbox, Google ML Kit (OCR), Hive (offline storage), FCM push, biometric auth (local_auth), fl_chart

DevOps & Tooling: Git, GitHub, GitHub Actions (CI), Docker, Vercel, Postman, ProGuard/R8, PR-based code review workflow

Data & AI: Data Analysis, Machine Learning, Graph Neural Networks, pandas, NumPy, scikit-learn
